

Product Data Sheet

1240 - Outdoor Grass Adhesive

DESCRIPTION

Spartan 1240 is a solvent based trowellable adhesive designed to adhere latex backed synthetic grass and outdoor carpet to clean, sound timber or concrete substrates. Concrete must be cured and free of any curing compounds. Refer to Australian Standard 2455- Textile Floor Coverings Installation Practise - General. Including moisture testing.

1240 cures quickly to form a strong, water-resistant bond to absorbent substrates. It is not suitable for use over treated timber substrates.

DIRECTIONS FOR USE

Apply by 'V' notched spreader. Since the backing of most outdoor carpet and synthetic grass is highly textured, the depth of the 'V' must be at least 3.2mm. Heavily textured back grass will require a 'V' notched trowel of up to 8mm. The key here is to ensure an adequate transfer of adhesive to floorcovering. This means a minimum 80% coverage of adhesive to the back of the floorcovering is required.

Spread adhesive, then lay carpet into its still-wet film.

Apply pressure to the top of the carpet with a roller or similar to ensure that the back of the carpet is immersed into the adhesive film. Do not use Spartan 1240 if rain is expected within 2 hours.

Spartan 1240 is not designed for use with PVC materials.

Coverage approx. 1-2m² per litre. For hard to hold grass or carpets or when installing over low absorbent substrates, it is necessary to allow adhesive to tack up prior to installing floorcovering. Always check & ensure good transfer

CLEAN UP

Use suitable Solvent Cleaner to clean tools.

SHELF LIFE

Up to 12 months in sealed container and stored at 20°C.

Note: Always carry out your own site test to confirm suitability of this product with your application. Additional information on physical properties, health hazards, storage, handling, and transport is available in the Safety Data Sheet (SDS), available on request.
